

ProAssign ACT™ ACE Inquiry

Action Learning Sets for Business Breakthrough

No matter the problem or issue, there is always someone ready to offer advice, give their opinions or try to do the job for us, quicker and better. Most of the time what is needed is 'the killer question' or 'the light-bulb question' to help us move out of stuckness.

ACE Enquiry uses the key concepts of Action Learning Sets or Cycles of Enquiry to create a powerful and transformational way to gain breakthrough with an important or urgent issue within a team or an organisation. We can all think of times when, given people's undivided attention for a period of time, we managed to resolve a particular deep and seemingly-impossible problem.

ProAssign-ACT ACE Enquiry allows teams to develop the critical skills to achieve Business Breakthrough with your organisation, creating shift and increasing performance. The programme teaches people how to work more effectively and efficiently as teams within the strong boundaries of professional enquiry.
